

How to setup Login with Facebook using Asp.net

- 1) Register your application into Facebook to have client ID
 - a. For Registering your application
 - i. Login here

1. <https://developers.facebook.com/apps>

i. Here is how to setup

- 2) Download source code
- 3) Update web.config file's application setting keys
- 4) Upload code into your domain, **it will not work with localhost**
- 5) in sample application, I have not used any 3rd part dll, it is pure java script base authentication
- 6) Facebook is returning user data in JSON format, I have used simple string functions to manipulate it, but you can use proper JSON string parser.
- 7) In this sample you will get Facebook ID, Email, first Name and Last Name
