

The cytotoxic activity of the tropane alkaloids, hederacine A (**1**) and hederacine B (**2**), previously isolated from the methanol extract of the aerial parts of *Glechoma hederaceae*, was assessed by the MTT cytotoxicity assay using colon cancer cell line (CaCo-2). The IC₅₀ values for **1** and **2** were found to be 86.6 and 301.0 μ M, respectively.
