

**Sql Membership Provider**  
All options from sql membership provider are available including hashed or encrypted passwords

asp.net web application

**Web Service Membership Provider**  
Every membership function request requires session key validation.  
All transmissions occur using flat text since encryption and hashing happen via the membership provider server-side.

Win App 1

@sso.xkey

Static Mode Key File

Web App 1

~/Keys/sso.xkey

Win App 2

Dynamic Mode  
Generate session by  
username and password

Web App 2

**Shared ApplicationName and Users**
