Thank you for purchasing our product. This is the documentation to help you getting the product working. You can contact us if you need assistance and we'll do our best to help you.

Introduction

jQuery Carousel Evolution for WordPress is a WordPress plugin that allows you to easily create powerfull carousel slider in a few minutes. You can then integrate it into any page with a single shortcode. It includes a full back-end interface to create and customize your Carousel. It also offers a preview mode to easily try out some settings before pushing them live.

The Carousel also supports YouTube videos and Vimeo videos, enabling you to play your chosen videos directly into your Carousel !

Installation

1 - Copy the "carousel_wpress" folder into your wordpress "wp-content/plugins/" folder using your favorite FTP program.

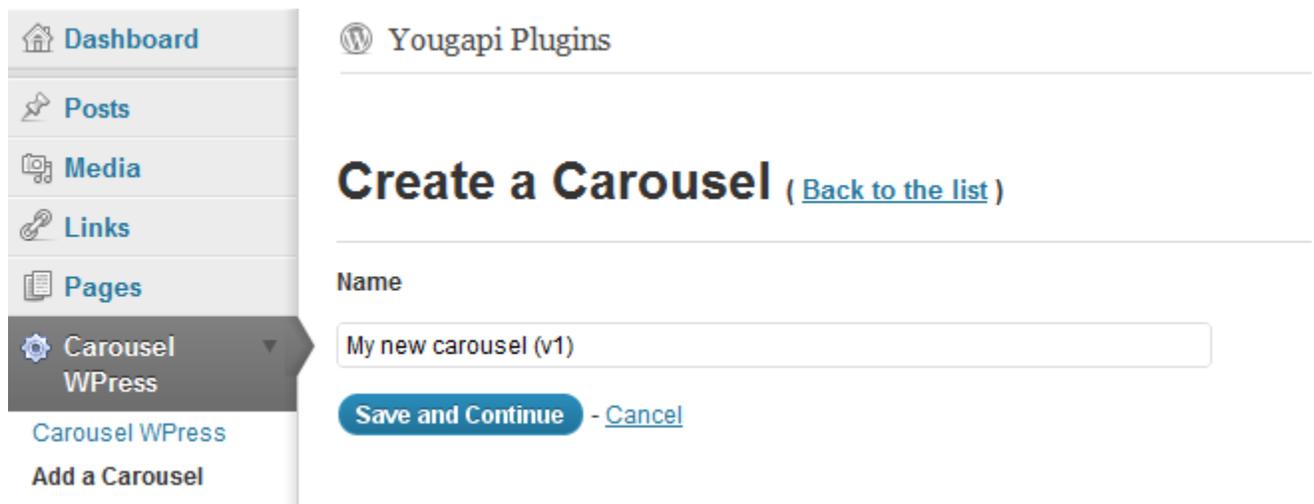

2 - Go to your WordPress "Manage Plugins" page, find the "**Carousel Evolution for WordPress**" in your plugins list and click on activate.

That's it for the installation !

Carousel management

Creating a Carousel and its entries

Once the plugin has been activated you will notice a new menu on the side called “Carousel WPress” enabling you to create and manage your carousels.

Create your new carousel by choosing a name and hit the save button. You will then be redirected to a page where you can add your carousels entries.

Each slide correspond to one entry. You can define the main slide **image URL**, the **url** to open when the image is clicked and the **title**.

Note also that you can define the slide **type: image or video**. For the video type you can use a YouTube or Vimeo video link to make the video play directly into the carousel when the main image is clicked.

View the carousels list

Clicking on the “Carousel WPress” link from the side bar displays the list of all the carousels you have added. You can edit each one, edit each carousel entries, and you can delete as well.

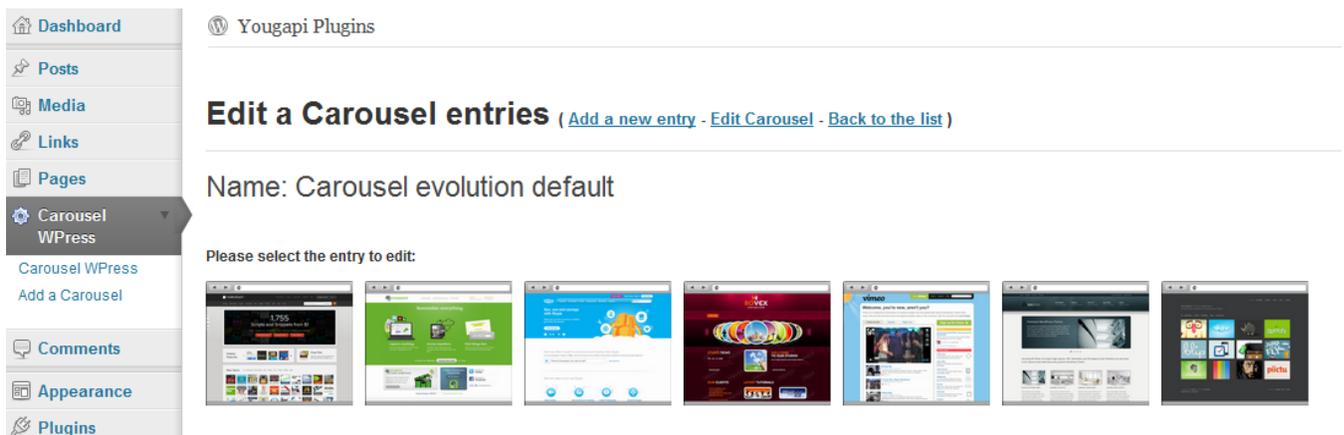

Dashboard Yougapi Plugins Howdy, yougapi Help

Carousels list ([Add a Carousel](#))

jhjh (0 entry)	Preview - Edit Carousel - Edit entries (0) - Delete
My new carousel (v1) (0 entry)	Preview - Edit Carousel - Edit entries (0) - Delete
test (1 entry)	Preview - Edit Carousel - Edit entries (1) - Delete
Carousel evolution default (7 entries)	Preview - Edit Carousel - Edit entries (7) - Delete
Carousel test 1 v2 (7 entries)	Preview - Edit Carousel - Edit entries (7) - Delete

Editing carousel entries

Each image bellow correspond to a carousel entry (a slide). Click on each image in order to be able to edit that entry.

Dashboard Yougapi Plugins

Edit a Carousel entries ([Add a new entry](#) - [Edit Carousel](#) - [Back to the list](#))

Name: Carousel evolution default

Please select the entry to edit:

Preview mode

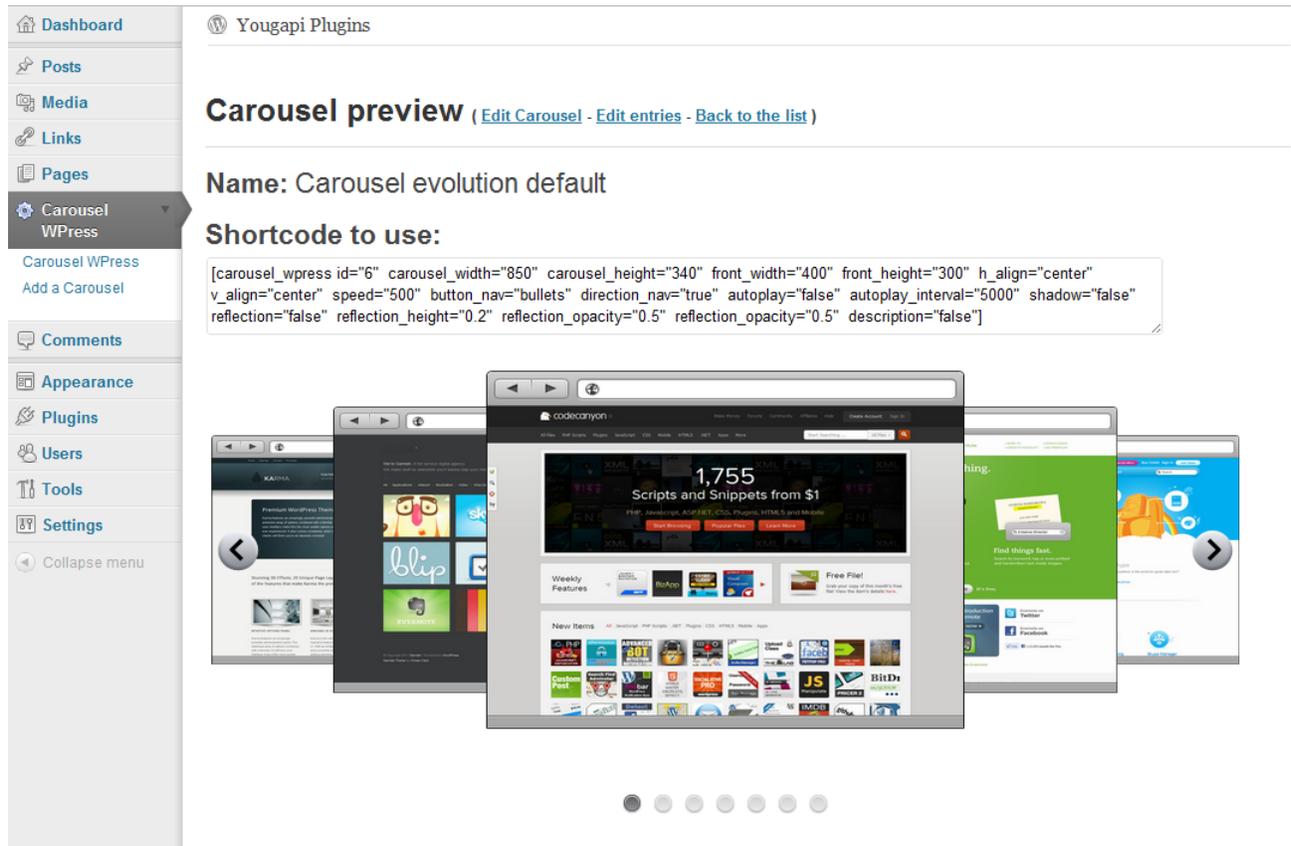

From the carousels list page, clicking on the preview link will take you to a page where you can preview your carousel before integrating in to your pages. It also enable you to copy/paste the shortcode to use.

By default the shortcode correspond to your saved carousel settings. But from that page, you can change all your carousel settings and view the changes right away, and get the correct shortcode to use.

That way you can use one same carousel, and create from it different kind of carousels (one with the reflection feature for ex, another with a different display style etc) !

Integrating a carousel into your page

When you have finished creating and customizing your carousel, from the preview mode you will be able to see a shortcode to use. Just copy code that code into any post or page and the carousel will be integrated.

Dashboard Youogapi Plugins

Carousel preview ([Edit Carousel](#) - [Edit entries](#) - [Back to the list](#))

Name: Carousel evolution default

Shortcode to use:

```
[carousel_wpress id="6" carousel_width="850" carousel_height="340" front_width="400" front_height="300" h_align="center" v_align="center" speed="500" button_nav="bullets" direction_nav="true" autoplay="false" autoplay_interval="5000" shadow="false" reflection="false" reflection_height="0.2" reflection_opacity="0.5" reflection_opacity="0.5" description="false"]
```

The carousel preview shows a sequence of website thumbnails, including one for 'codecanyon' with a prominent '1,755 Scripts and Snippets from \$1' offer. Navigation arrows and a dot-based indicator are visible at the bottom of the carousel.

Please note that you can play with the width and height of the carousel zone, and also with the width and height of the front image. Also note that for better displays, use a layout with a full page (without a side bar). that way you can have your carousel displayed on the full with page.
