# Success Story: Generate any document dynamically through a website without significant licensing costs

**Project Scope:** We wanted to be able to deliver any document that our system produces off our website or via email. Our documents prior to TallPDF.NET were either Microsoft Word documents or Microsoft Access report snapshots – neither of which are capable of being generated dynamically through a website without significant licensing costs from Microsoft and significant investments in automation of the Microsoft Office suite.

*NETCO, Inc., is a title insurance and escrow company with over forty five offices throughout the country. We are a full service firm which specializes in fast and accurate delivery of information. We have offices in eighteen states and are expanding daily. NETCO prides itself on being at the forefront of technology in the title insurance industry. NETCO can be found at http://www.netcotitle.com on the web.*

### Evaluation

We originally began work with a competitor's product but found that it was not fully compatible with ASP.NET, our chosen backend technology and we consistently ran into problems getting the formatting and output to be accurate, if produced at all. Frustrated we began investigating alternatives to the product we already owned. After a lot of time at PlanetPDF I found TallPDF.NET. Not only was it 100% .NET managed code – a feature I had heavily desired – but it worked, it worked fast, and it worked easily. I was a novice .NET developer at the beginning of this project and had difficulty using some of the other products I tried, but TallPDF.NET is simple. Using TallPDF.NET I am able to produce a document using a XML template, making it easy to pass the document maintenance to a non programmer. TallPDF.NET is simple to learn and use but it is also capable – once you begin delving into it you find that there's truly not much it can't do.

### Why TallComponents?

I chose TallComponents originally for the price and .NET compatibility. The price of TallPDF.NET is, relatively speaking, cheap to moderate.

*"Rarely have I ever worked with a company that actually carried through with what it promised"*

**Brian Schkerke,** Vice President
Information Technology

I'll choose TallComponents in the future because of the service and reliability of their products. Rarely have I ever worked with a company that actually carried through with what it promised. I have had to use the technical support services of TallComponents three times and I was always kept up to date and I was always provided with a solution – even when that solution didn't apply to a problem caused by TallComponents. TallComponents is the sort of company I like to work with.

### Personal Note

I truly love working with TallPDF.NET. It's an easy program to get results out of and that makes me look good to my superiors. It's a fast program to get results out of and that makes me look good too. I've dealt with the TallComponents support team repeatedly and I've always found them to be friendly, professional and knowledgeable. Anyone who is looking for a fantastic .NET component to produce PDF documents needs to take a serious look at TallPDF.NET. Anyone who wants to contact me for further comment, is free to do so at bmschkerke@netcotitle.com. I've worked with TallPDF.NET now for several months and I've never once sat back and wished for another product.
